

## Who is Lyras?

Lyras is a Danish company located in Aalborg, Denmark. The company was founded in 2017 based on several years of rigorous research and development. Lyras was founded on an ambition to prove that microbial inactivation in milk could be done efficiently using UV-light instead of pasteurization.

**Our goal is to:** accelerate the global reduction of CO2 emissions within the processing industry

## WHAT IS RASLYSATION?

Raslysation is a sustainable alternative to conventional pasteurization. By using UV-light instead of heat the technology will efficiently disinfecting liquids and drastically lower energy use.

# WHY IS IT INTERESTING TO LOOK AT WHEY TREATMENT?

- Traditionally heat treatment is used to control the microbiology
- Non thermal treatments are interesting in the production of high-quality whey products

#### **HEAT TREATMENT:** DRAWBACKS

- High energy and water consumption
- Changes to protein structure denaturation and aggregation
- Maillard reactions
- Oxidation

#### **RASLYSATION:** ADVANTAGES

- Low energy and water consumption
- No thermal effects
- Mild treatment of whey proteins

## **RESULTS:** WHEY MICROBIOLOGY

Microbiological analyses	Raw CFU/mL	Pasteurized CFU/mL	Raslysed CFU/mL
Aerobic plate count	>300000	13	16
Coliforms	1549	<10	<10
Enterobacteriaceae	3684	<10	<10
Thermophilic Plate Count	248	<10	<10
Thermoduric	155	51	35
Yeast	19	<10	<10
Anaerobic Sulphite Reducing Bacteria	131	<10	<10

**CONCLUSION**: Only aerobic plate count and thermoduric show counts above detection limit  $\rightarrow$  No statistical difference between UV and P.

## WHEY PROTEIN STRUCTURE ANALYSED BY TECHNOLOGICAL INSTITUTE

#### **Protein oxidation**

- Mass spectrometry (LC-MS/MS) → identifying modified peptides
- Tryptophan fluorescence spectroscopy → measure loss of fluorescence due to oxidation
- Thiol quantification assay → thiol content

#### Protein aggregation/denaturation

- Protein solubility test → large aggregates
- Small-angle X-ray scattering (SAXS) → medium sized but soluble aggregates
- Gel filtration chromatography → soluble aggregates

### WHEY PROTEIN STRUCTURE

#### Conclusion from technological institute

Collectively, none of the methods used in this assignment show consistent differences between pasteurized and UV-treated whey. Based on the present data, we are not able to show a significant difference between whey from bactofugated+pasteurized milk and whey from raslysed+pasteurized milk or between pasteurized and raslysed whey.

## CONCLUSION

- Based on the applied analyses there is no difference between
  - Whey from the two milk treatments
  - Raslysed whey and pasteurized whey
- No difference in
  - Microbial reductions
  - Oxidation
  - Aggregation
  - → Milk has been pasteurized → whey already affected by heat

## NATIVE WHEY PROTEINS

- Raslysation of heat sensitive whey proteins reduce the microbial content
- The proteins are preserved in the natural state without heat damage
- →improve bioavailability of the proteins
